

CLAIM 4 (New)

A user water storage comprising:

a receptacle (reservoir) of water means a prime storage or stock water from the water

Supply Systems means;

a terminal means a water accumulator through which water supply provides to the housing consume.

CLAIM 5 (New)

A water quality standard means a comparison of qualitative value (criterion) of Water

Supply provides to consume, such drink water is the highest quality water.

CLAIM 6 (New)

A water recycling means reclaiming waste water that meets the quality standard of the water supply for a type consumption means.

CLAIM 7 (New)

A purification water process means reusing return steam of a heating system that condensed from cold water supply into the heating system means.

CLAIM 8 (New)

A purification water process means a return of a water heating system means that cooled from cold water supply into the heating system means.

CLAIM 9(New)

A purification water process means boiling water from a Hot Water Heater cooled from cold water supply into the Hot Water Heater system

CLAIM 10 (New)

A water recycling means reusing the waste water from a high quality consumption or low quality water supply by filtering means only for a lower quality consumption means.

CLAIM 11 (New)

A water collection means a combined system of water supply sources suitable to save water during consumption and comprising:

a Central Water System;

from rain, snow, etc.(from roofs, yards, side walk, streets, sewers, catch basin, etc.),
underground waters, ground waters, recycling waters, reuse waters, and like

CLAIM 12 (New)

A water ingredient means water impregnated with ingredient during condensing process.

Respectfully,

Gersh Korsinsky,

CLAIM 1.

A user water storage comprising:

a receptacle (reservoir) of water means a prime storage or stock water from water supply system means;

a terminal means a water accumulator through which water supply the housing consumptions.

CLAIM 2

A water quality standard means a comparison of qualitative value (criterion) of water for consumption, such drink water is the highest quality water;

CLAIM 3.

A water recycling means reclaiming waste water that meets the quality standard of the water supply for a type consumption means.

CLAIM 4.

A purification water process means reusing return steam of a heating system that condensed from cold water supply into system means.

CLAIM 5

A purification water process means a return of a water heating system means that cooled from cold water supply into the heating system means.

CLAIM 6.

A purification water process means a boiling water from a Hot Water Heater cooled from cold water supply into the Hot Water Heater system.

Page 4

CLAIM 7.

A recycling water means reusing the waste water from a high quality consumption or low quality water supply by a filtering means only for a lower quality consumption means

CLAIM 8.

A water collection means a combined system of water supply sources suitable to save water during consumption and comprising:

a Central water supply system ;

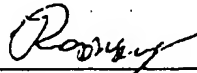

from rain, snow, etc. (from roofs, yards ,side walk ,streets, sewers, catch basin, etc).

underground waters, ground waters ,recycling waters ,reuse waters , and like

CLAIM 9.

An ingredient water means water impregnated with ingredient during condensing process

Respectfully,
